POST-REGLAZE CARE INFORMATION

01

A weekly cleaning is essential to keep your new or refurbished tub looking its best. Remove all debris using a soft cloth and avoid scouring pads and abrasive cleaners that can damage the finish.

02

The use of any cleaners containing ammonia or BLEACH, wire brushes, harsh abrasives will dull the bathroom finish. Therefore, it is better not to use them.

03

Use only recommended products, do not ignore the instructions for cleaning products. Try to test the new product on a small area of the bathtub before applying it to the entire surface.

04

Any cleaning agent with prolonged exposure spoils the surface. After using it, you must thoroughly wash the bath.

05

The automatic air freshener spray system can leave stains on the surface because it is produced in the same place.

06

It is better to use liquid drain cleaners. Drip chemicals into the funnel slowly, trying not to get on the surface of the bath. In case of contact, immediately remove the cleaner with a cloth.

07

If you are bathing a dog or other pet in the tub, place a rubber mat on the bottom. So the animal will be more comfortable, and the surface of the bath will not be scratched by claws.

08

Do not store products such as soaps and shampoos on the edge of the bath, as they can adversely affect the surface over time.

09

When bathing children, it is better to use soft rubber toys.

10

If you use a bath mat, then after bathing, be sure to remove it from the bottom, as water trapped under the suction cups spoils the surface over time.
